

OBJECTIVE

3rd-year Information Systems student at University of Information Technology – VNU-HCM (UIT) with a strong foundation in Business Analysis, Data Warehousing, and Process Optimization. Experienced in requirements analysis, system modeling, and translating complex data/AI capabilities into actionable business values. Seeking a **Business Analyst Intern** position to leverage my technical background (ERP, BI, AI/ML) and analytical mindset to support ERP/AI ERP implementation, streamline business processes, facilitate UAT, and deliver high-quality user experiences.

EDUCATION

University of Information Technology – VNU-HCM (UIT) 2023 – 2027 (expected)
Bachelor of Information Systems GPA: 8.06/10
Relevant Coursework: Information Systems Analysis & Design, Database Management Systems, Data Mining, Web Development

SKILLS

Business Analysis	Requirements Gathering, Process Mapping, Documentation, UML
ERP & Systems	SAP S/4HANA, Odoo, SSIS, SSAS
Data & BI	Power BI, SQL (SQL Server, PostgreSQL), Excel (Pivot, Power Query), MDX
Tools	draw.io, Figma, Notion, Git/GitHub
Tech Background	Python (Pandas, Scikit-learn), PHP, PySpark, Kafka
Languages	IELTS 6.5 (2022)

PROJECTS

E-commerce Consumer Behaviour Analysis & BI Solution2025

SSIS, SSAS, SQL Server, Power BI, MDX, Python, Scikit-learn

GitHub

- Requirements Gathering & Process Mapping:** Elicited and analyzed business requirements for e-commerce performance tracking; modeled system workflows and mapped data flows for multi-dimensional cohort analysis.
- Data Integration Planning:** Designed and implemented automated data pipelines to centralize 100k+ transaction records, ensuring data consistency and reliability for downstream business reporting.
- Data-Driven Business Strategy:** Applied clustering models to segment customers and predict spending behavior, translating complex analytical outputs into actionable strategies for improving customer lifetime value.
- BI Dashboarding & KPI Tracking:** Developed interactive Power BI dashboards to monitor core KPIs (retention, purchase frequency); created clear metric documentation to facilitate user adoption and decision-making.

Bank Customer Churn Prediction & Explainability (AI/ML)2026

Python, Scikit-learn, TensorFlow, XGBoost, LightGBM, SMOTE, SHAP

GitHub

- Business Problem Analysis:** Addressed the critical business issue of customer churn by analyzing a 10k-record bank dataset to identify core behavioral indicators and customer pain points.
- Data Analysis & Feature Engineering:** Conducted exploratory data analysis (EDA) and engineered new features to uncover hidden patterns in customer behavior and product usage.
- Predictive Modeling for Retention:** Benchmarked multiple machine learning algorithms to accurately identify users at high risk of churning, providing a proactive tool for customer success teams.
- Stakeholder Communication & XAI:** Utilized explainable AI techniques (SHAP, LIME) to interpret complex model results, translating technical outputs into clear, actionable business drivers for management.
