

OBJECTIVE

3rd-year Information Systems student at University of Information Technology – VNU-HCM (UIT) with a strong foundation in Business Analysis, Data Warehousing, and Process Optimization. Experienced in requirements gathering, system modeling, and translating complex data into actionable dashboards. Seeking an **ERP Intern** position to leverage analytical skills and technical background to support smart factory solutions (MES/ERP/IoT), streamline business processes, and facilitate UAT.

EDUCATION

University of Information Technology – VNU-HCM (UIT) 2023 – 2027 (expected)
Bachelor of Information Systems GPA: 8.06/10
Relevant Coursework: Information Systems Analysis & Design, Database Management Systems, Data Mining, Web Development

SKILLS

Business Analysis	Requirement Gathering, Process Modeling (Draw.io, Visio), BRD, User Stories, UAT
Data & ERP Design & Tools	Data Warehousing, Data Analysis, Power BI, SSIS, SSAS, Microsoft Office Figma, Axure, Jira, Git/GitHub, Docker, Streamlit
Programming Languages	SQL, Python, HTML, CSS, Java, C++, PHP IELTS 6.5 (2022)

PROJECTS

E-commerce Consumer Behaviour Analysis & BI Solution 2025
SSIS, SSAS, SQL Server, Power BI, Python, Draw.io, Visio | [GitHub](#)

- Business Requirement Analysis (BRD):** Collected and analyzed reporting requirements from various departments; authored Business Requirement Documents (BRD) and user stories to align technical deliverables with business goals.
- Process Modeling & Data Warehousing:** Modeled data flow processes using Draw.io and Visio; designed a Star Schema architecture and built SSAS cubes to centralize 100k+ transaction records.
- Data Analysis & Visualization:** Developed interactive Power BI dashboards utilizing SQL and MDX to visualize customer segmentation KPIs, providing actionable insights for stakeholders.
- System Testing (UAT) & Documentation:** Conducted rigorous software testing and facilitated User Acceptance Testing (UAT) with end-users, delivering comprehensive documentation to ensure smooth adoption.

NYC Taxi — Real-time Fleet Monitoring System (IoT/Smart Factory Concept) 2026
PySpark, Kafka, PostgreSQL, Streamlit, HTML/CSS, Docker, Figma, Axure | [GitHub](#)

- System Architecture & Wireframing:** Researched Smart Factory (IoT/MES) concepts to design system workflows; utilized Figma and Axure to create intuitive UI wireframes for a real-time monitoring dashboard.
- Real-time Data Processing:** Configured a Kafka pipeline to ingest continuous JSON event streams at 200 msg/s, simulating the high-velocity data collection required in modern Manufacturing Execution Systems (MES).
- Data Analysis & Anomaly Detection:** Implemented real-time analytical models (Isolation Forest) in Python to monitor route anomalies, translating complex data into operational risk control alerts.
- Interactive Web UI Deployment:** Built a responsive web dashboard using Streamlit (with custom HTML/CSS) to display live metrics, integrating continuous testing to ensure system reliability and seamless user experience.
