OBJECTIVE

3rd-year Information Systems student at University of Information Technology – VNU-HCM (UIT) with strong web programming foundations (HTML5, CSS3, JavaScript, PHP) and database design skills. Experienced in building automated data pipelines, optimizing databases, and programming in Python. Seeking an **SEO Technical Intern** position to leverage programming skills and analytical capabilities to optimize website speed, crawlability, search engine indexing, and site architecture.

EDUCATION

University of Information Technology – VNU-HCM (UIT) 2023 – 2027 (expected)
Bachelor of Information Systems GPA: 8.06/10
Relevant Coursework: Web Application Development, Database Management Systems, Information Systems Analysis & Design

SKILLS

Web Technologies	HTML5, CSS3, JavaScript, PHP, WordPress, HTTP/DNS
Programming	Python, SQL, C++, Java
Data & Crawling	Web Scraping, Pandas, Excel, SQL Server, PostgreSQL
Tools	Git/GitHub, VS Code
Languages	IELTS 6.5 (2022)

PROJECTS

NYC Taxi — Real-time Fleet Intelligence & Anomaly Detection 2026
PySpark, Kafka, Docker, PostgreSQL, Streamlit, Pandas, Scikit-learn | [GitHub](#)

- **Web Application & Performance:** Developed an interactive web-based dashboard using Streamlit, optimizing rendering speeds and state management for real-time data visualization.
- **Server Log Processing Pipeline:** Architected a low-latency ingestion pipeline (Kafka) capable of parsing JSON event streams at 200 msg/s, demonstrating skills directly applicable to large-scale server log analysis and crawl budget auditing.
- **Python Automation & Scripting:** Programmed robust Python scripts to automate database writing operations (PostgreSQL) and trigger scheduled tasks, reducing manual intervention in data processing.
- **Infrastructure & Containerization:** Deployed containerized microservices (Docker) and configured network routing between web components and databases, building foundational knowledge in server architecture.

E-commerce Consumer Behaviour Analysis & BI Solution 2025
SSIS, SSAS, SQL Server, Power BI, MDX, Python, Scikit-learn | [GitHub](#)

- **Database Optimization for Speed:** Modeled structured Star Schemas and implemented strategic database indexing in SQL Server, significantly improving query execution times and data retrieval speed.
- **Automated Data Extraction (ETL):** Engineered automated SSIS packages to extract, transform, and load raw CSV datasets, establishing reliable pipelines similar to automated web scraping and SEO data collection workflows.
- **Data Cleaning & Validation:** Implemented rigorous data cleaning protocols to ensure data integrity across 100k+ records, maintaining high data quality standards for downstream reporting.
- **Analytical Reporting:** Developed comprehensive Power BI dashboards to track performance metrics, translating raw data into actionable insights for continuous technical optimization.
