OBJECTIVE

3rd-year Information Systems student at University of Information Technology – VNU-HCM (UIT) with practical experience in Business Analytics, Data Warehousing, and E-commerce Customer Behavior analysis. Skilled at translating complex datasets into actionable strategic insights that drive platform growth and monetization. Seeking a **Platform Strategy Intern** position at TikTok to leverage data mining, BI, and problem-solving capabilities.

EDUCATION

University of Information Technology – VNU-HCM (UIT) 2023 – 2027 (expected)
Bachelor of Information Systems GPA: 8.06/10
Relevant Coursework: Information Systems Analysis & Design, Database Management Systems, Data Mining, Web Development

SKILLS

Analytics & BI	Power BI, Excel (Pivot, Power Query), SQL (PostgreSQL, SQL Server), SSAS, MDX
Programming	Python (Pandas, NumPy, Seaborn, Plotly), PHP
Machine Learning	Scikit-learn, XGBoost, PySpark, Kafka
Tools	Git/GitHub, Docker
Languages	IELTS 6.5 (2022)

PROJECTS

E-commerce Consumer Behaviour Analysis & BI Solution 2025
SSIS, SSAS, SQL Server, Power BI, MDX, Python, Scikit-learn | [GitHub](#)

- Data-Driven Growth Strategy:** Centralized 100k+ e-commerce transaction records into a Data Warehouse, building a reliable foundation for data-driven strategic planning and performance reporting.
- Cohort Analysis & BI:** Designed multi-dimensional OLAP cubes and interactive Power BI dashboards to track platform growth metrics, including user retention, purchase frequency, and Average Order Value (AOV).
- Customer Segmentation & LTV:** Applied clustering algorithms to segment users by behavioral patterns; utilized predictive models to estimate spending tiers, directly identifying key drivers of Customer Lifetime Value (LTV).
- Actionable Monetization Insights:** Translated complex analytics into clear, strategic dashboards that enable stakeholders to optimize user acquisition and monetization efforts.

Bank Customer Churn Prediction & Strategic Insights 2026
Python, Scikit-learn, XGBoost, LightGBM, SMOTE, SHAP, Pandas | [GitHub](#)

- User Retention Analytics:** Conducted deep exploratory data analysis (EDA) on 10,000 user records to uncover hidden behavioral patterns and identify core indicators of platform churn.
- Predictive Risk Modeling:** Overcame severe class imbalance and benchmarked multiple machine learning algorithms to build a robust early-warning system for at-risk users.
- Strategic Attribution (XAI):** Applied SHAP and LIME to interpret complex AI models, quantifying the exact impact of active membership and specific feature usage on user retention.
- Business Decision Support:** Synthesized analytical findings into actionable retention strategies, demonstrating the ability to turn raw user data into strategic business recommendations.
