OBJECTIVE

Proactive 3rd-year Information Systems student at University of Information Technology – VNU-HCM (UIT) with a strong foundation in Business Analysis, Data Warehousing, and Process Optimization. Experienced in requirements analysis, system modeling, and translating complex data/AI capabilities into actionable business values. Seeking a **Business Analyst Intern** position to leverage my technical background (ERP, BI, AI/ML) and analytical mindset to support ERP/AI ERP implementation, streamline business processes, facilitate UAT, and deliver high-quality user experiences.

EDUCATION

University of Information Technology – VNU-HCM (UIT) 2023 – 2027 (expected)
Bachelor of Information Systems GPA: 8.06/10
Relevant Coursework: Information Systems Analysis & Design, Database Management Systems, Data Mining, Web Development

SKILLS

Business Analysis	Requirement Gathering, Process Mapping, Documentation, UAT Support, Stakeholder Communication
ERP & Systems Tools & Management	SAP S/4HANA, Odoo, Data Warehousing (SSIS, SSAS), System Integration draw.io, UML, Figma, Notion, Agile/Scrum Methodology, Excel/Google Sheets, PowerPoint
Data Analysis & BI	Power BI, Advanced Excel (Pivot, Power Query), SQL (SQL Server, PostgreSQL, MySQL), MDX
AI & Tech Background	Python (Pandas, Scikit-learn), AI/ML (Predictive Modeling, Anomaly Detection), Apache Spark, Kafka
Languages & Others	IELTS 6.5 (2022), Logical Thinking, Problem Solving

PROJECTS

E-commerce Consumer Behaviour Analysis & BI Solution 2025
SSIS, SSAS, SQL Server, Power BI, MDX, Python, Scikit-learn | [GitHub](#)

- **Requirements & Process Mapping:** Analyzed business requirements for e-commerce performance tracking; mapped data flows to design a Star Schema and OLAP cubes for multi-dimensional cohort analysis.
- **ETL & System Architecture:** Built automated SSIS pipelines to clean and centralize 100k+ transaction records into a SQL Server Data Warehouse, ensuring data consistency for downstream reporting.
- **Data Mining & Insights:** Applied K-Means clustering and Decision Trees to perform customer segmentation and predict spending levels, delivering actionable insights on customer lifetime value.
- **Reporting & Documentation:** Developed interactive Power BI dashboards integrating OLAP cubes and ML predictions to monitor retention and purchase frequency; prepared clear metric documentation for end-users.

Bank Customer Churn Prediction & Explainability (AI/ML) 2026
Python, Scikit-learn, TensorFlow, XGBoost, LightGBM, SMOTE, SHAP | [GitHub](#)

- **Business Problem Solving:** Addressed the critical business issue of customer churn by analyzing a 10k-record European bank dataset to identify core behavioral indicators.
- **Data Analysis & Preprocessing:** Conducted exploratory data analysis (EDA), handled 80/20 class imbalance with SMOTE, and engineered new features to improve prediction accuracy.
- **Predictive Modeling:** Benchmarked multiple ML algorithms (XGBoost, Random Forest, etc.) to accurately identify users at high risk of churning.
- **Insights & Explainability:** Utilized SHAP and LIME to interpret model results, translating complex AI/ML outputs into understandable business drivers (e.g., active membership, product usage) for stakeholders.

NYC Taxi — Real-time Fleet Intelligence & Anomaly Detection 2026
PySpark, Kafka, Docker, PostgreSQL, Streamlit, Pandas, Scikit-learn | [GitHub](#)

- **System Design & Implementation:** Designed the architecture for a real-time fleet monitoring system using PySpark and Kafka to process JSON events at 200 msg/s.
- **Risk Management & AI:** Deployed an Isolation Forest + MinCovDet ensemble model to detect real-time route anomalies, enhancing operational risk control and automation.
- **UI/UX & User Feedback:** Built an interactive Streamlit dashboard for real-time operational reporting, ensuring smooth user experience for system managers and facilitating easy performance tracking.
- **Testing & Reliability:** Conducted continuous system testing, monitored data streams into PostgreSQL, and automated model retraining to maintain high system reliability.
